SDG

Identity & Access Management

TAKE OUR RISK-BASED HEALTH ASSESSMENT

Whether your organization is modernizing, expanding, or just looking for guidance evaluating and selecting a vendor – but is unsure where to start – SDG's popular Risk-Based Health Assessment is a good first step.

We are technology agnostic and our expert advisors will help shape your thinking on the path forward, protect your investments, and provide a sustainable and secure solution.

BUILD A SUSTAINABLE SOLUTION FOR THE FUTURE

Ponemon Institute reports that insider threats account for 62% of security incidents, solidifying that entitlement and onboarding processes must be run with strict identity and access risk controls.

At SDG, we help you navigate technology choices, consider frameworks to leverage best practices, and integrate your legacy environments to meet your organization's unique security, privacy, and compliance requirements.

As cyber threats evolve and increase, every organization must look beyond traditional IAM and deploy scalable and sustainable identity and access management solutions.

Governance is the key word, and we will partner with you to make sure you have the right controls in place to mitigate insider, third party, and external threats to your organization.

THERE'S MORE TO IAM THAN WHICH TECHNOLOGY PLATFORM

We have a strong team of experts, architects, designers, and developers to bring your strategy to reality. Transformation initiatives take many forms, including: Implementing Single Sign-On (SSO) and Federation, Password Management, Authentication and Fraud Protection, Roles-Based User Provisioning, Risk- Based Access Certification, Virtualized Identity Access, and more.

IDENTITY GOVERNANCE

- Password Management
- Access Request & Approval
- Role Based Access Provisioning
- Analytics & Access Risk
- Risk Based Access Certification

ACCESS MANAGEMENT

- Single Sign-On & Federation
- Authentication
- Authorization and Entitlements
- Privileged Account Management
- API Management and Security
- Extended Enterprise – Mobile & Cloud

DIRECTORY SERVICES

- Directory Services Infrastructure based on LDAP & Active Directory
- Virtualized Identity Access (VDS)
- Enterprise Meta Directory
- Cloud based Directory Services

WE CAN YOU SUPPORT YOUR ORGANIZATION 24/7

In addition to thoughtful and easy guidance by experts you can trust, we work to support brands globally with Levels 1, 2 and 3 technical support – available 24/7. We can assist your organization's need to maintain operational excellence and protect your brand, your assets, and your customers with a service and pricing model that works for your individual IAM strategy.
